

Casabene Excavations and Drainage operate in the Werribee area west of Melbourne.

This Western Plains area is predominantly very hard basalt which requires the most powerful and productive Hydraulic Breakers to smash this rock. This is the area where the Indeco Hydraulic Breaker dominates. Casabene Excavations have vast experience in working in this area as Michael Casabene began his drainage business over 50 years ago.

Current Managing Director, Pip Casabene, purchased an Indeco Model MES 2000 Breaker fitted to EX 220 excavator on 21.04.94. Since then his Company has purchased twenty three Indeco Hydraulic Breakers including units fitted to 1.5 tonne excavators through to the powerful 5000 series Breaker fitted to 30 tonne excavators. Casabene Excavations Drainage and Plumbing run 80 pieces of equipment, including articulated Dump Trucks, Graders, Excavators, Skid Steers and Water Trucks.

The most recent purchase is a new series HP2000 Breaker, fitted to Sumitomo SH210. The HP2000 is the latest version of the unit purchased 13 years ago. The old 2000 continues to operate reliably and efficiently supported by Indeco service and 100% parts availability. The photo shows Partner and General Manager, Marty Vaina, proudly standing next to his new equipment. Marty, who has vast experience with Hydraulic Rock Breakers and excavators commented that the Indeco HP2000 Breaker, is a perfect match with the 21 tonne excavator.

Pip Casabene, representing Casabene Excavations, has visited the Indeco headquarters in Bari, Italy to inspect the breakers being manufactured. Pip noted that the latest high tech machinery and procedures are used to produce Indeco Breakers of the highest quality.

'INDECO FOR GREATER PRODUCTIVITY'
